### **ABSTRACT / ABSTRAK**

Build upon it, a good governance will generate a good public services as well. Nevertheless, there are a few question while processing the enforcement practically. As occur in Puskesmas Juanda, the researcher have found a few question such as the unoptimal yet referral health services, the undistributed of health coverage, and the inadequate of facility and infrastructure along the lack quality and quantity of a health personnel resourch. This research intend to define the realization of a good governance which is implemented by Public Health Office by following the standar operation procedure (SOP) in order to realize a healthy, independent, and justice community of Puskesmas Juanda. This research implemented by Public Health Office Puskesmas Juanda on January. Focus on the implementation of principle partisipation, legal certainty, transparancy, responsiveness, oriented to concensus, justice , effectiveness, and efficiency, accountability, dan vision strategy factor that influence a governance of health services. Technique of collecting data by interview, observation, and document while information took on purposive sampling. Kind of research that used by researcher is descriptive and will be analized on qualitative. The outcome from this research known that the implementation of a good governance from Health services in Puskesmas Juanda on January, 24-25 2021 has not implemented yet due the principle of a good health service governance. It is because of the Public Health Office still not able to apply the principles of effectivity and effeciency in the allocation of the human resourch and the management of health budgeting until it is difficult to administer the justice, transparancy, responsiveness pricnciple toward people needs.

## **1. BACKGROUND**

Drugs (short for Narcotics, Psychotropics and other addictive substances) are indeed needed by every human being for treatment so that to meet the needs in the field of treatment studies and scientific studies a continuous production of narcotics is needed for these sufferers. On the basis of considering Law Number 35 of 2009 concerning Narcotics, it is stated that Narcotics on the one hand are drugs or materials that are useful in the field of medicine or health services and the development of science and on the other hand can also cause dependence which is very detrimental if misused or used without strict and careful control and supervision.

Drugs if used irregularly according to doses will cause physical and mental harm to those who use them and can cause dependence on the user himself. This means that a very strong psychological desire to use the drug continuously due to emotional causes. The problem of drug abuse is not only a problem that needs attention for the Indonesian state, but also for the international world.

One of the efforts made to prevent drug abuse among adolescents is to increase religious activities, counseling and socialization of the dangers of drug abuse among students, communication with parents of students, and trying to take seriously and appropriately the problem of drug abuse.

## **2. METHOD**

The socialization of the dangers of drug abuse was carried out at the Wiyata Husada Samarinda Institute of Health and Science Technology (ITKES) using participatory methods, lectures and discussions. Participants who take part in the socialization activity are 1st semester students from all majors. The socialization activity was carried out on the date and number of participants who took part in the socialization activity consisting of 500 students in semester 1.

The location of the socialization activity on the dangers of drug abuse was held in the Ball Room of the Wiyata Husada Samarinda Institute of Health and Science Technology (ITKES). In this socialization activity, it consists of pre-activities, namely coordination with the school and BNN Samarinda City, opening ceremony, giving material and finally a question and answer session and discussion.

## **3. RESULT AND CONCLUSION**

Community service activities are carried out in the form of socialization and education to service participants. The target of the activity is teenagers or college students. The form of community service activities is in the form of socialization and education related to the dangers of drug abuse among adolescents. Community service activities will be held on April 1, 2022 at the MJ Ballroom ITKES WHS.

Before the service activity begins, the implementer coordinates with parties related to technical in the field and explains the activity plan to be in accordance with the plan. The partner participates in helping to prepare the venue and prepare the tools that will be used during the event. Service participants are adolescent students.

At the beginning of the implementation of the activity, a presentation of material was carried out in advance by related speakers about the dangers of drug abuse among adolescents. Before conducting socialization activities, participants were first given a pretest by providing a knowledge questionnaire related to the dangers of drug abuse among adolescents. After filling out the questionnaire, the executor maps the results and analyzes the results of the questionnaire. The results of the pretest analysis conducted an assessment to measure the extent of knowledge and understanding related to the dangers of drug abuse among adolescents. After the pretest, the speaker introduced himself first before providing education, the speaker then tried to explore the participants' knowledge with an interactive question and answer method. The speaker asked several questions related to the dangers of drug abuse among adolescents, then the speaker began to provide education related to the dangers of drug abuse among adolescents for full day.

Each activity took place seemed enthusiastic and paid attention to the content of the material provided. The material giving activity lasted for approximately 45 minutes and ended with a discussion session. Several questions were obtained from the mentoring participants related to the material presented. After answering questions from participants, pamateri evaluates related to the provision of material that has been delivered by providing questions and providing opportunities for participants to answer these questions.

After the material is finished, participants are first given a post test by giving a questionnaire to the participants. All laboratory workers have better knowledge of the dangers of drug abuse among adolescents.

#### **4. SUMMARY AND ADVICE**

Low knowledge and understanding related to the dangers of drug abuse among adolescents, promotional and preventive efforts are carried out by lecturers and students of the Bachelor of Health Administration ITKES Wiyata Husada Samarinda, so that adolescents know and understand the dangers of drug abuse among adolescents, in the hope of increasing adolescent knowledge and awareness of the abuse of dangerous drugs.

#### **5. ACKNOWLEDGE**

Undergraduate Study Program in Health Administration ITKES Wiyata Husada Samarinda would like to thank all participants who have supported this community service activity so that it runs well and smoothly.
